

Community Heart Saver Education Program, a Community Health Outreach Partnership of Trinity Episcopal Church of Baraboo, Holy Cross Episcopal Church of Wisconsin Dells, and St. John the Baptist Episcopal Church of Portage, is pleased to present an AED (Automated External Defibrillator) purchase program especially prepared for the parishes of the Episcopal Diocese of Milwaukee.

Beginning with conversations at a Clergy Day presentation in 2012, and following nearly two years of product research and discussions with factory representatives and provider/distributors, our team has arranged for an AED purchase program especially for the parishes of the Episcopal Diocese of Milwaukee.

Seeking an AED that is most adaptable to a wide-range of environments, most affordable/cost effective, and, and most importantly, the most responder-friendly, easiest-to-use, our team selected the Philips FRx Automated External Defibrillator. (Philips is one of the largest electronics companies in the world and is the largest manufacturer of automated external defibrillators worldwide.)

Our search for "best possible price" from the best available distributor has culminated in our partnering with the company that we started with: AED Superstore (an Allied 100 LLC company), of Woodruff, Wisconsin.

In partnership, we are offering the "Philips HeartStart FRx AED School and Community Package . . .

at an unmatched price.

We have purchased our instructional equipment, materials and supplies from AED Superstore from the onset of our program. Our experience –at all levels of consultation, service and pricing- has been excellent. (Please learn about the company, and the FRx School and Community Package, at www.aedsuperstore.com).

Our program receives no compensation what-so-ever from your purchases of this package . . . the compensation is that the affordable availability of this package is consistent with our mission “To contribute to the wellness and safety of our community . . .”

Should your parish consider the purchase of an AED -from any source- we can provide CPR-AED training for your responders, AED Responder Program management (policies and procedures), and inspection and maintenance protocols.

Please visit our exhibit at Convention.
